

Table 1: **Effect of Elite College Education on Job Callback**

	callback
EliteSchoolCandidate	.14*** (.032)
MaleCandidate	-.044 (.032)
Observations	864
$R^2$	0.023

**Notes:** This table contains regressions predicting whether the fictitious candidate's job application was called back (1 or 0) as a function of whether subjects had an elite college education (1 or 0) and the subject's gender (1 if male, 0 otherwise). Standard OLS standard errors are reported.

On average, candidates with elite college education appear to be 14 percentage points more likely to receive a callback from their job applications. The coefficient on candidate's gender is not statistically significant at the significance level of 5%.
